Jubilee Medal Lecture

The Chemical and Biological Versatility of Riboflavin

V. Massey

283

Thudichum Medal Lecture

L-Glutamate as a Central Neurotransmitter: Looking Back

J. C. Watkins

297

Wellcome Trust Award Medal Lecture

Integrin Structure

M. J. Humphries

311

Colloquia

671st Meeting, University of Leeds

colloquium: Biotechnology of Extracellular Matrix

Potential use of stem cells from bone marrow to repair the extracellular matrix and the central nervous system

D. J. Prockop, S. A. Azizi, D. Colter, C. DiGrolamo, G. Kopen and D. G. Phinney

341

Morphogenetic messages are in the extracellular matrix: biotechnology from bench to bedside

A. H. Reddi

345

Recombinant expression systems for the production of collagen

N. J. Bulled, D. C. A. John and K. E. Kadler

350

Expression of recombinant human type I–III collagens in the yeast Pichia pastoris

J. Myllyharju, M. Noikelainen, A. Vuorela and K. I. Kivirikko

353

Towards a fibrous composite with dynamically controlled stiffness: lessons from echinoderms

357

Inductive activity of recombinant human growth and differentiation factor-5

R. C. Sprio, L.-S. Liu, M. A. Hedaran, A. Y. Thompson, C. K. Ng, J. Pohl and J. W. Poser

362
# colloquium: Steroid Receptor Co-Activators and the Remodelling of Chromatin

<table>

Aminopeptidase A, which generates one of the main effector peptides of the brain renin-angiotensin system, angiotensin III, has a key role in central control of arterial blood pressure

Protein processing mechanisms: from angiotensin-converting enzyme to Alzheimer's disease

Complexity of transcriptional control in neuropeptide gene expression; enkephalin gene regulation during neurodevelopment

Protective peptides derived from novel glial proteins

Phosphinic peptide inhibitors as tools in the study of the function of zinc metallopeptidases

Conserved roles for peptidases in the processing of invertebrate neuropeptides

Exploring the Caenorhabditis elegans and Drosophila melanogaster genomes to understand neuropeptide and peptidase function

---

colloquium: Moving Signals and Molecules Through Membranes

Cyclic-nucleotide- and Ca\(^{2+}\)/calmodulin-regulated channels in plants: targets for manipulating heavy-metal tolerance, and possible physiological roles

Ca\(^{2+}\) signalling in stomatal guard cells

Auxin transport: providing a sense of direction during plant development

Mechanism of protein import across the chloroplast envelope

Novel mechanisms for the targeting of proteins into and across chloroplast membranes

Membrane protein import in yeast mitochondria

Biochemical and molecular approaches to understanding protein import into peroxisomes

Organization of transport from endoplasmic reticulum to Golgi in higher plants
## colloquium: Efflux Proteins
