Keilin Memorial Lecture

The molecular machinery of Keilin’s respiratory chain

P.R. Rich

1095–1105

Novartis Medal Lecture

Modular proteins at the cell surface

I.D. Campbell

1107–1114

Biochemical Society Main Meeting

679th Meeting, University of Essex, Colchester, 2–4 July 2003

Regulation in Metabolism Group Colloquium
The Glucose/Fatty Acid Cycle 1963–2003: A Tribute to Sir Philip Randle

Edited by M.A. Titheradge (Sussex) and P. Ferré (INSERM, Paris)
Sponsored by AstraZeneca and Institut de Recherches Servier

The glucose–fatty acid cycle: a physiological perspective
K.N. Frayn

1115–1119

Molecular mechanisms regulating hormone-sensitive lipase and lipolysis
C. Holm

1120–1124

Fatty acid recycling in adipocytes: a role for glyceroneogenesis and phosphoenolpyruvate carboxykinase

1125–1129

Roles of PPARδ in the control of muscle development and metabolism
P.A. Grimaldi

1130–1132

Myocardial carnitine palmitoyltransferase I as a target for oxidative modification in inflammation and sepsis
S. Eaton, K. Fukumoto, G. Stefanutti, L. Spitz, V.A. Zammit and A. Pierro

1133–1136

Short-chain 3-hydroxyacyl-CoA dehydrogenase deficiency associated with hyperinsulinism: a novel glucose–fatty acid cycle?
S. Eaton, I. Chatziandreou, S. Krywawych, S. Pen, P.T. Clayton and K. Hussain

1137–1139

Mechanism of glucose sensing in the small intestine
J. Dyer, S. Vayro and S.P. Shirazi-Beechey

1140–1142
Regulation of pyruvate dehydrogenase complex activity by reversible phosphorylation

M.J. Holness and M.C. Sugden 1143–1151

Fatty acid-induced insulin resistance: role of insulin receptor substrate 1 serine phosphorylation in the retroregulation of insulin signalling

Bypassing the glucose/fatty acid cycle: AMP-activated protein kinase

Extending the glucose/fatty acid cycle: a glucose/adipose tissue cycle

M. Guerre-Millo 1161–1164

AZD7545, a novel inhibitor of pyruvate dehydrogenase kinase 2 (PDHK2), activates pyruvate dehydrogenase in vivo and improves blood glucose control in obese (fa/fa) Zucker rats

AZD7545 is a selective inhibitor of pyruvate dehydrogenase kinase 2

Hormone Group Colloquium

Integration of Mitogenic and Migratory Signals from G-Protein-Coupled Receptors and Tyrosine Kinases

Edited by T. Palmer (Glasgow)

VEGF signalling: integration and multi-tasking in endothelial cell biology

I. Zachary 1171–1177

Mechanisms controlling EGF receptor endocytosis and degradation

I. Dikic 1178–1181

The anti-apoptotic response of the G_{q/11}-coupled muscarinic receptor family

A.B. Tobin and D.C. Budd 1182–1185

The role of ERK2 docking and phosphorylation of PDE4 cAMP phosphodiesterase isoforms in mediating cross-talk between the cAMP and ERK signalling pathways

M.D. Houslay and G.S. Baillie 1186–1190

Protease-activated receptor 2: activation, signalling and function

G.S. Cottrell, S. Amadesi, F. Schmidlin and N. Bunnett 1191–1197

Metalloprotease-dependent ErbB ligand shedding in mediating EGFR transactivation and vascular remodelling

S. Eguchi, G.D. Frank, M. Mifune and T. Inagami 1198–1202

EGFR signal transactivation in cancer cells

O.M. Fischer, S. Hart, A. Gschwind and A. Ullrich 1203–1208

Lysophosphatidic acid: mitogen and motility factor

Stress-induced ATP release from and growth modulation of human lens and retinal pigment epithelial cells
J.A. Eldred, J. Sanderson, M. Wormstone, J.R. Reddan and G. Duncan 1213–1215

Exogenous and intracellularly generated sphingosine 1-phosphate can regulate cellular processes by divergent pathways
S. Spiegel and S. Milstien 1216–1219

Receptor tyrosine kinase–GPCR signal complexes
N.J. Pyne, C. Waters, N.A. Moughal, B.S. Sambi and S. Pyne 1220–1225

Membrane Group Colloquium
Protein Synthesis and Quality Control at the Endoplasmic Reticulum
Edited by N. Bulleid (Manchester) and S. High (Manchester)
Sponsored by AstraZeneca and Wolf Laboratories

Maintaining the permeability barrier during protein trafficking at the endoplasmic reticulum membrane
A.E. Johnson 1227–1231

Getting to the membrane: how is co-translational protein targeting to the endoplasmic reticulum regulated?
M.R. Pool 1232–1237

Biogenesis of tail-anchored proteins
N. Borgese, S. Brambillasca, P. Soffientini, M. Yabal and M. Makarow 1238–1242

Intramembrane proteolysis and post-targeting functions of signal peptides
B. Martoglio 1243–1247

Making membrane proteins at the mammalian endoplasmic reticulum
F.J.L. Lecomte, N. Ismail and S. High 1248–1252

Organization of translocon complexes in ER membranes
A.V. Nikonov and G. Kreibich 1253–1256

How does the translocon differentiate between hydrophobic sequences that form part of either a GPI (glycosylphosphatidylinositol)-anchor signal or a stop transfer sequence?
J.A. Dalley and N.J. Bulleid 1257–1259

Retrograde transport of toxins across the endoplasmic reticulum membrane

Colloquium
Exercise Metabolism: Nutrition, Substrate Utilization and Regulation
Edited by R. Beneke, G. Jones and J. Shearman (Essex)

Experiment and computer-aided simulation: complementary tools to understand exercise metabolism
R. Beneke 1263–1266
Nutritional status, metabolic responses to exercise and implications for performance
R.J. Maughan 1267–1269

Modulation of carbohydrate and fat utilization by diet, exercise and environment
A.E. Jeukendrup 1270–1273

Regulation of PDH activity and isoform expression: diet and exercise
S.J. Peters 1274–1280

Insulin signalling, exercise and cellular integrity
J.P. Kirwan and L.F. del Aguila 1281–1285

The renin-angiotensin system and physical performance
J. Payne and H. Montgomery 1286–1289

Transgenic models – a scientific tool to understand exercise-induced metabolism: the regulatory role of AMPK (5'-AMP-activated protein kinase) in glucose transport and glycogen synthase activity in skeletal muscle

Bioenergetics Group Colloquium
Superoxide: Production and Destruction
Edited by J. Moody (Plymouth), M. Brand (Cambridge) and T. Moore (Sussex)

Using mitochondria-targeted molecules to study mitochondrial radical production and its consequences

Mitochondrial matrix reactive oxygen species production is very sensitive to mild uncoupling
S. Miwa and M.D. Brand 1300–1301

Novel peptoids for the detection and suppression of reactive oxygen and nitrogen species
A.E.O. Fisher and D.P. Naughton 1302–1304

Oxidative stress and aging – the use of superoxide dismutase/catalase mimetics to extend lifespan
J.N. Sampayo, M.S. Gill and G.J. Lithgow 1305–1307

Cell respiration and formation of reactive oxygen species: facts and artefacts
H. Nohl, A.V. Kozlov, L. Gille and K. Staniek 1308–1311

Cytochrome c, an ideal antioxidant
M.O. Pereverzev, T.V. Vygodina, A.A. Konstantinov and V.P. Skulachev 1312–1315

Possible role of free oxidation processes in the regulation of reactive oxygen species production in plant mitochondria
V.N. Popov 1316–1317

The irony of manganese superoxide dismutase
J.W. Whittaker 1318–1321

Prokaryotic Cu,Zn superoxide dismutases
A. Desideri and M. Falconi 1322–1325
Role of prokaryotic Cu,Zn superoxide dismutase in pathogenesis
A. Battistoni 1326–1329

Iron superoxide dismutases: structure and function of an archaic enzyme
G. Schäfer and S. Kardinahl 1330–1334

Rotting by radicals – the role of cellobiose oxidoreductase?
M.G. Mason, P. Nicholls and M.T. Wilson 1335–1336

Kinetics of superoxide scavenging by glutathione: an evaluation of its role in the removal of mitochondrial superoxide
C.M. Jones, A. Lawrence, P. Wardman and M.J. Burkitt 1337–1339

Colloquium
The Enzymatic Defence against Glycation in Health, Disease and Therapeutics

Edited by P.J. Thornalley (University of Essex)
Sponsored by Baxter Healthcare, USA, Cancer Research UK, Dynamis Therapeutics Inc., USA, Fresenius Medical Care AG, Germany, Gambro AB, Sweden, GlaxoSmithKline, TransGenic Inc., Japan, Woerwag Pharma and Chroma Therapeutics, UK

The enzymatic defence against glycation in health, disease and therapeutics: a symposium to examine the concept
P.J. Thornalley 1341–1342

Glyoxalase I – structure, function and a critical role in the enzymatic defence against glycation
P.J. Thornalley 1343–1348

Enzymatic deglycation with amadoriase enzymes from Aspergillus sp. as a potential strategy against the complications of diabetes and aging
V.M. Monnier and X. Wu 1349–1353

Fructosamine 3-kinase, an enzyme involved in protein deglycation
G. Delpierre and E. Van Schaftingen 1354–1357

α-Oxoaldehyde metabolism and diabetic complications

Role of genetic variability in systems of receptor-mediated and enzymatic defence against glycation in the long-term consequences of diabetes mellitus
K. Kaňková 1364–1366

Aldose reductase and the importance of experimental design
M.J.C. Crabbe 1367–1371

Protecting the genome: defence against nucleotide glycation and emerging role of glyoxalase I overexpression in multidrug resistance in cancer chemotherapy
P.J. Thornalley 1372–1377

Glyoxalase I inhibitors in cancer chemotherapy

Glycation in food and metabolic transit of dietary AGEs (advanced glycation end-products): studies on the urinary excretion of pyrraline
A. Foerster and T. Henle 1383–1385
Renal clearance of glycation adducts: anti-glycation defence in uraemia and dialysis
A. Dawnay 1386–1389

Toxicity of glyoxals – role of oxidative stress, metabolic detoxification and thiamine deficiency
N. Shangari, W.R. Bruce, R. Poon and P.J O’Brien 1390–1393

Removal of advanced glycation end products in clinical renal failure by peritoneal dialysis and haemodialysis

Anti-AGEing defences against Alzheimer’s disease

Role of methylglyoxal adducts in the development of vascular complications in diabetes mellitus
M. Bourajjaj, C.D.A. Stehouwer, V.W.M. van Hinsbergh and C.G. Schalkwijk 1400–1402

Protein modification by advanced Maillard adducts can be modulated by dietary polyunsaturated fatty acids
M. Portero-Otin, M.J. Bellmunt, J.R. Requena and R. Pamplona 1403–1405

Bacterial production of methylglyoxal: a survival strategy or death by misadventure?

Anti-glycation defences in yeast
A. Ponces Freire, A. Ferreira, R. Gomes and C. Cordeiro 1409–1412

Role of lipids in chemical modification of proteins and development of complications in diabetes

Quantitative screening of protein biomarkers of early glycation, advanced glycation, oxidation and nitrosation in cellular and extracellular proteins by tandem mass spectrometry multiple reaction monitoring
N. Ahmed and P.J. Thornalley 1417–1422

Accumulation of fructosyl-lysine and advanced glycation end products in the kidney, retina and peripheral nerve of streptozotocin-induced diabetic rats
N. Karachalias, R. Babaei-Jadidi, N. Ahmed and P.J. Thornalley 1423–1425

Mass spectrometric analysis of glucose-modified ribonuclease

Enzymatic deglycation – a new paradigm or an epiphenomenon?
B.S. Szwergold and P.J. Beisswenger 1428–1432

Modulation of in vivo 3-deoxyglucosone levels

Application of monoclonal antibody libraries for the measurement of glycation adducts
R. Nagai and S. Horiuchi 1438–1440
Reactive oxygen species in oncogenic transformation
L. Behrend, G. Henderson and R.M. Zwacka 1441–1444

Sprouty: a controversial role in receptor tyrosine kinase signalling pathways
X. Li 1445–1446

Vascular endothelial dysfunction in aging: loss of Akt-dependent endothelial nitric oxide synthase phosphorylation and partial restoration by (R)-α-lipoic acid
A.R. Smith and T.M. Hagen 1447–1449

Rapid S-nitrosothiol metabolism by platelets and megakaryocytes

Co-localization of cell surface receptors at high spatial resolution by single-particle fluorescence imaging
I. Karakikes, R.E. Barber, I.E.G. Morrison, N. Fernández and R.J. Cherry 1453–1455

Unravelling Nature’s Networks
University of Sheffield, 21 July 2003

Edited by N. Monk and N. Lawrence (Sheffield)
Sponsored by Pfizer and The Centre for Bioinformatics and Computational Biology, University of Sheffield

Unravelling Nature’s networks
N.A.M. Monk 1457–1461

Signalling networks, inflammation and innate immunity
S.K. Dower and E.E. Qwarnstrom 1462–1471

Systems biology markup language: Level 2 and beyond
A. Finney and M. Hucka 1472–1473

Extracting meaning from microarray data
R.K. Curtis and M.D. Brand 1474–1475

Interpreting correlations in metabolomic networks
R. Steuer, J. Kurths, O. Fiehn and W. Weckwerth 1476–1478

Deriving statistical models for predicting peptide tandem MS product ion intensities
F. Schütz, E.A. Kapp, R.J. Simpson and T.P. Speed 1479–1483

Integrating functional genomics data
P. Kemmeren and F.C.P. Holstege 1484–1487

Identification of surrogate markers for determining drug activity using proteomics
C.M. McClelland and W.J. Gullick 1488–1490
On the structure of protein–protein interaction networks
A. Thomas, R. Cannings, N.A.M. Monk and C. Cannings 1491–1496

Supervised classification for gene network reconstruction
L.A. Soinov 1497–1502

Analysis and modelling of signal transduction pathways in systems biology

A probabilistic model for the extraction of expression levels from oligonucleotide arrays
M. Milo, A. Fazeli, M. Niranjan and N.D. Lawrence 1510–1512

Petri Net representations in systems biology
J.W. Pinney, D.R. Westhead and G.A. McConkey 1513–1515

Reverse engineering of genetic networks with Bayesian networks
D. Husmeier 1516–1518

Reconstructing gene networks: what are the limits?
J. Stark, D. Brewer, M. Barenco, D. Tomescu, R. Callard and M. Hubank 1519–1525

Modelling the controls of the eukaryotic cell cycle
B. Novák and J.J. Tyson 1526–1529

Correction: 1531
