Single Biomolecules – *in silico*, *in vitro* and *in vivo*

Held at the University of Hertfordshire, U.K., 11–13 September 2014.

Periplasmic quality control in biogenesis of outer membrane proteins Zhi Xin Lyu and Xin Sheng Zhao	133–138
Probing DNA interactions with proteins using a single-molecule toolbox: inside the cell, in a test tube and in a computer Adam J. M. Wollman, Helen Miller, Zhaokun Zhou and Mark C. Leake	139–145
Molecular simulation studies of hydrophobic gating in nanopores and ion channels Jemma L. Trick, Prafulla Aryal, Stephen J. Tucker and Mark S. P. Sansom	146–150
Elucidating ligand binding and channel gating mechanisms in pentameric ligand-gated ion channels by atomistic simulations Federico Comitani, Claudio Melis and Carla Molteni	151–156
High-resolution free energy landscape analysis of protein folding Polina V. Banushkina and Sergei V. Krivov	157–161
The membranes of Gram-negative bacteria: progress in molecular modelling and simulation Syma Khalid, Nils A. Berglund, Daniel A. Holdbrook, Yuk M. Leung and Jamie Parkin	162–167
Is the cellular and molecular machinery docile in the stationary phase of <i>Escherichia coli</i> ? Parul Mehta, Goran Jovanovic, Liming Ying and Martin Buck	168–171
Probing the kinetic and thermodynamic consequences of the tetraloop/tetraloop receptor monovalent ion-binding site in P4-P6 RNA by smFRET Namita Bisaria and Daniel Herschlag	172–178
Life in extreme environments: single molecule force spectroscopy as a tool to explore proteins from extremophilic organisms Katarzyna M. Tych, Toni Hoffmann, Matthew Batchelor, Megan L. Hughes, Katherine E. Kendrick, Danielle L. Walsh, Michael Wilson, David J. Brockwell and Lorna Dougan	179–185
Modelling biomacromolecular assemblies with continuum mechanics Benjamin Hanson, Robin Richardson, Robin Oliver, Daniel J. Read, Oliver Harlen and Sarah Harris	186–192

Protein Acylation: from Mechanism to Drug Discovery

Held at the University of Edinburgh, U.K., 10 - 12 September 2014.

Enzymatic protein depalmitoylation by acyl protein thioesterases David T.S. Lin and Elizabeth Conibear	193–198
--	---------

Postsynaptic nanodomains generated by local palmitoylation cycles Masaki Fukata, Atsushi Sekiya, Tatsuro Murakami, Norihiko Yokoi and Yuko Fukata	199–204
Aberrant palmitoylation in Huntington disease Shaun S. Sanders and Michael R. Hayden	205–210
Wnt acylation and its functional implication in Wnt signalling regulation Claudia Y. Janda and K. Christopher Garcia	211–216
The zDHHC family of S-acyltransferases Kimon Lemonidis, Martin W. Werno, Jennifer Greaves, Cinta Diez-Ardanuy, Maria C. Sanchez-Perez, Christine Salaun, David M. Thomson and Luke H. Chamberlain	217–221
How many lives does CLIMP-63 have? Patrick A. Sandoz and F. Gisou Van Der Goot	222–228
Post-translational myristoylation at the cross roads of cell death, autophagy and neurodegeneration Dale D.O. Martin and Michael R. Hayden	229–234
Fatty acyl donor selectivity in membrane bound O-acyltransferases and communal cell fate decision-making Rubina Tuladhar and Lawrence Lum	235–239
Palmitoylation and palmitoyl-transferases in <i>Plasmodium</i> parasites Nicola Hodson, Brandon Invergo, Julian C. Rayner and Jyoti S. Choudhary	240–245
Membrane bound O-acyltransferases and their inhibitors Naoko Masumoto, Thomas Lanyon-Hogg, Ursula R. Rodgers, Antonios D. Konitsiotis, Anthony I Magee and Edward W. Tate	246–252
Chemical reporters for exploring protein acylation Emmanuelle Thinon and Howard C. Hang	253–261
Cholesterylation: a tail of hedgehog Paulina Ciepla, Anthony I. Magee and Edward W. Tate	262–267

PINK1-Parkin Signalling in Parkinson's Disease and Beyond

Held at Charles Darwin House, London, U.K., 2 December 2014.

Activation of the E3 ubiquitin ligase Parkin Thomas R. Caulfield, Fabienne C. Fiesel and Wolfdieter Springer	269–274
Stimulation of electron transport as potential novel therapy in Parkinson's disease with mitochondrial dysfunction Melissa Vos, Patrik Verstreken and Christine Klein	275–279
PINK1 activation – turning on a promiscuous kinase Liesbeth Aerts, Bart De Strooper and Vanessa A. Morais	280–286

Biochemical properties of the kinase PINK1 as sensor protein for mitochondrial damage signalling Cornelia Rüb, Nadja Schröder and Wolfgang Voos	287–291
Linking microtubules to Parkinson’s disease: the case of parkin Graziella Cappelletti, Francesca Casagrande, Alessandra Calogero, Carmelita De Gregorio, Gianni Pezzoli and Daniele Cartelli	292–296
The endoplasmic reticulum/mitochondria interface: a subcellular platform for the orchestration of the functions of the PINK1–Parkin pathway? Zoi Erpapazoglou and Olga Corti	297–301
iPS models of Parkin and PINK1 Aleksandar Rakovic, Philip Seibler and Christine Klein	302–307
