Metabolic Pathways Analysis 2015

Held at Bom Jesus, Braga, Portugal., 8–12 June 2015.

Dynamics of NAD-metabolism: everything but constant Christiane A. Opitz and Ines Heiland	1127–1132
A reductionist approach to model photosynthetic self-regulation in eukaryotes in response to light Anna Matuszyńska and Oliver Ebenhöh	1133–1139
Manipulation of the ATP pool as a tool for metabolic engineering Oliver Hädicke and Steffen Klamt	1140–1145
Hierarchical decomposition of metabolic networks using <i>k</i> -modules Arne C. Reimers	1146–1150
A multi-scale, multi-disciplinary approach for assessing the technological, economic and environmental performance of bio-based chemicals Markus Herrgård, Sumesh Sukumara, Miguel Campodonico and Kai Zhuang	1151–1156
Quantitative analysis of drug effects at the whole-body level: a case study for glucose metabolism in malaria patients Jacky L. Snoep, Kathleen Green, Johann Eicher, Daniel C. Palm, Gerald Penkler, Francois du Toit, Nicolas Walters, Robert Burger, Hans V. Westerhoff and David D. van Niekerk	1157–1163
Genome-scale modelling of microbial metabolism with temporal and spatial resolution Michael A. Henson	1164–1171
Modelling metabolic evolution on phenotypic fitness landscapes: a case study on C ₄ photosynthesis David Heckmann	1172–1176
Metabolic flux prediction in cancer cells with altered substrate uptake Jean-Marc Schwartz, Michael Barber and Zita Soons	1177–1181
Modelling metabolism of the diatom <i>Phaeodactylum tricornutum</i> Dipali Singh, Ross Carlson, David Fell and Mark Poolman	1182–1186
Mathematical models for explaining the Warburg effect: a review focussed on ATP and biomass production Stefan Schuster, Daniel Boley, Philip Möller, Heiko Stark and Christoph Kaleta	1187–1194
Resource allocation in metabolic networks: kinetic optimization and approximations by FBA Stefan Müller, Georg Regensburger and Ralf Steuer	1195–1200

Translation UK 2015

Held at the University of Aberdeen, U.K., 7–9 July 2015.

T-cells require post-transcriptional regulation for accurate immune responses Fiamma Salerno and Monika C. Wolkers	1201–1207
Mechanisms of regulation of mature miRNAs Benjamin P. Towler, Christopher I. Jones and Sarah F. Newbury	1208–1214
Quantifying the ‘escapers’ among RNA species Iolanda Ferro and Zoya Ignatova	1215–1220
Co-translational assembly of protein complexes Jonathan N. Wells, L. Therese Bergendahl and Joseph A. Marsh	1221–1226
Translational dysregulation in cancer: eIF4A isoforms and sequence determinants of eIF4A dependence Farheen Raza, Joseph Alexander Waldron and John Le Quesne	1227–1233
eIF2B: recent structural and functional insights into a key regulator of translation Noel C. Wortham and Christopher G. Proud	1234–1240
Regulation of the expression and activity of Unr in mammalian cells Emma C. Anderson and Pól Ó Catnaigh	1241–1246
Tuning innate immunity by translation Robert Rauscher and Zoya Ignatova	1247–1252
Ccr4–Not is at the core of the eukaryotic gene expression circuitry Zoltan Villanyi and Martine A. Collart	1253–1258
Mutation of genes controlling mRNA metabolism and protein synthesis predisposes to neurodevelopmental disorders Francesca Sartor, Jihan Anderson, Colin McCaig, Zosia Miedzybrodzka and Berndt Müller	1259–1265
Rate control in yeast protein synthesis at the population and single-cell levels Estelle Dacheux, Helena Firczuk and John E.G. McCarthy	1266–1270
Ribosomal profiling adds new coding sequences to the proteome Muhammad Ali S. Mumtaz and Juan Pablo Couso	1271–1276
Poly(A)-binding proteins and mRNA localization: who rules the roost? Nicola K. Gray, Lenka Hrabáľková, Jessica P. Scanlon and Richard W.P. Smith	1277–1284
Modulation of the cytoplasmic functions of mammalian post-transcriptional regulatory proteins by methylation and acetylation: a key layer of regulation waiting to be uncovered? Tajekesa K.P. Blee, Nicola K. Gray and Matthew Brook	1285–1295
Correction	
Molecular action of sulphonylureas on K_{ATP} channels: a real partnership between drugs and nucleotides Heidi de Wet and Peter Proks	1297
