578TH MEETING, GALWAY	
Colloquium: Aspects of Industrial Enzymology	
Large-scale isolation of enzymes. <i>By</i> M.-R. Kula, G. Johansson & A. F. Bückmann	1
The stabilization of enzymes for industrial use. <i>By</i> S. A. Barker, C. J. Gray & A. W. Lomath	5
The stability of immobilized enzymes. <i>By</i> D. B. Johnson	7
Applications of enzyme thermistors. <i>By</i> K. Mosbach, B. Danielsson & B. Mattiasson	11
Immobilized cofactors in reactor systems. <i>By</i> R. England, R. Eisenthal, P. Gacesa & W. Whish	13
Communications	
The inactivation of xanthine-oxidizing enzymes, native and deflavo forms, in the presence of oxygen. <i>By</i> M. P. Coughlan & D. B. Johnson	18
Stability studies on invertase in microcapsules and bound to inorganic supports. <i>By</i> D. B. Johnson, M. L. O'Connor, T. J. Hackett & M. Kierstan	21
Preparation and some properties of deoxyribonucleic acid polymerase of high specific activity from <i>Mycobacterium smegmatis</i> . <i>By</i> G. R. Campbell, P. Carty & F. G. Winder	23
Molecular forms of deoxyribonucleic acid present in the purified enzyme from <i>Mycobacterium smegmatis</i> . <i>By</i> F. G. Winder & P. Carty	26
Relationship of the enzymic activity of polyacrylamide-gel-entrapped trypsin to pH. <i>By</i> M. D. Trevan & S. Grover	28
Effect of culture conditions on the survival of mammalian cells without medium change. <i>By</i> M. M. Clynes	30
Multiple patterns on induction of rat liver microsomal mono-oxygenases and other polypeptides by xenobiotics. <i>By</i> R. K. Murray, R. N. Sharma, J.-G. Joly, R. G. Cameron & E. Farber	32
Cerebral energy metabolism in hyperammonaemia. <i>By</i> B. B. O'Neill & D. J. O'Donovan	35
An evaluation of the use of haem-biosynthetic parameters in the detection of industrial and environmental lead exposure: δ -Aminolaevulinic acid and coproporphyrin. <i>By</i> M. R. Moore & P. A. Meredith	37

An evaluation of the use of haem-biosynthetic parameters in the detection of industrial and environmental lead exposure: Erythrocyte δ -aminolaevulinate dehydratase and blood protoporphyrin concentrations. <i>By</i> P. A. Meredith & M. R. Moore	39
The release of skeletal-muscle microsomal contents by selective treatment with sodium deoxycholate. <i>By</i> B. O'Halloran & D. R. Headon	41
The response of prostaglandin synthase preparation to the concentration of arachidonic acid. <i>By</i> R. Narayanan, A. McGrath, C. Tritschler, J. M. Manning & M. G. Harrington	42
Effect of halothane (2-bromo-2-chloro-1,1,1-trifluoroethane) on calcium-binding and -release by sarcoplasmic reticulum. <i>By</i> J. J. A. Heffron & G. A. Gronert	44
Synergistic stimulation by chlorpromazine and potassium ions of calcium-transport activity in brain plasma-membrane vesicles. <i>By</i> A. O'Callaghan & P. F. Duggan	47
Adenosine triphosphate-dependent calcium-transport systems: Generality of activation by potassium ions. <i>By</i> M. Adams & P. F. Duggan	49
Calcium phosphate analogues in milk and bone salts. <i>By</i> T. C. A. McGann	51
Effects of temperature on the action of autologous serum in mitogen-induced lymphocyte transformation. <i>By</i> P. B. Collins, P. C. Wiehe, M. W. M. Suen & A. H. Johnson	53
Peroxidase labelling of antibodies for use in enzyme immunoassay. <i>By</i> T. H. Adams & G. B. Wisdom	55
Regulation of lutropin (luteinizing-hormone) receptors in rat testis by pregnant-mare serum gonadotropin. <i>By</i> J. P. Gosling, P. Morgan, M. Ryan & P. F. Fottrell	57
The metabolism of thyrotropin-releasing hormone by guinea-pig brain. <i>By</i> D. J. Hayes, J. J. Phelan & G. O'Cuinn	59
A method for estimating standard errors of the mean concentrations of dissociated and undissociated forms of a weak acid in aqueous solution from experimentally determined values of pH and total acid. <i>By</i> J. P. Ryan	63
Gas-liquid-chromatographic analysis of 5-fluorouracil and its metabolite 5-fluorodihydrouracil in plasma. <i>By</i> B. J. McDermott, H. W. Van den Berg & R. F. Murphy	65
Derivatives of L-asparaginase designed to be immobilized <i>in vivo</i> . <i>By</i> N. Mattarella & T. Richardson	66
Evolutionary temperature adaptation of the calcium-dependent adenosine triphosphatase of fish sarcoplasmic reticulum. <i>By</i> H. McArdle & I. Johnston	69
Xanthine oxidase activity in mammalian cell cultures. <i>By</i> M. M. Clynes, M. P. Hurley & M. F. Shannon	72
Hypothalamic inactivation of thyroliberin (thyrotropin-releasing hormone). <i>By</i> E. C. Griffiths, J. A. Kelly, N. White & S. L. Jeffcoate	74
Hypothalamic inactivation of luliberin (luteinizing-hormone-releasing hormone). <i>By</i> J. A. Kelly, E. C. Griffiths, S. L. Jeffcoate & C. R. N. Hopkinson	76

579TH MEETING, LONDON

Colloquium: Bioenergetic Aspects of Microbial Processes

Chairman's Remarks <i>By</i> J. W. Drozd	79
Respiration, oxidative phosphorylation and yields in aerobic bacteria. <i>By</i> C. W. Jones	80

Overflow metabolism in aerobic micro-organisms. <i>By</i> D. W. Tempest & O. M. Neijssel	82
The physiology of aerobic bacteria in immobilized systems. <i>By</i> H. J. Somerville & J. R. Mason	85
The physiology of microbial growth in activated sludge. <i>By</i> M. Davies	88
Bioenergetic aspects of the microbial leaching of metals. <i>By</i> D. P. Kelly	91
The potential of systems integration in microbial photosynthesis. <i>By</i> C.-G. Hedén	94
Colloquium: Non-Hormonal Hypoglycaemic Compounds	
An introduction to the control of carbohydrate metabolism: Possible sites for pharmacological intervention in hyperglycaemia. <i>By</i> H. S. A. Sherratt & L. Hue	99
The relationship of diphenyleiodonium-induced hypoglycaemia to the specific covalent modification of NADH-ubiquinone oxidoreductase. <i>By</i> D. P. Bloxham	103
Mechanism of the hypoglycaemia caused by hypoglycin and pent-4-enoate. <i>By</i> D. Billington	106
Communications	
A possible pathogenic mechanism for the induction of rotenone tumours. <i>By</i> M. Gosálvez, J. Díaz-Gil, J. Alcañiz & J. Borrell	113
Induction of casein synthesis in a rat mammary tumour epithelial cell line by dimethyl sulphoxide. <i>By</i> M. J. Warburton, L. P. Head & P. S. Rudland	115
The effect of paracetamol and other foreign compounds on protein synthesis in isolated adult rat hepatocytes. <i>By</i> J. Gwynn, J. R. Fry & J. W. Bridges	117
Phenobarbitone induction of microsomal mono-oxygenase activity in primary cultures of adult rat hepatocytes. <i>By</i> J. R. Fry, P. Wiebkin & J. W. Bridges	119
Metabolic activation of benzo[α]pyrene and 9-hydroxybenzo[α]pyrene by tissue fractions from rat liver and lung. <i>By</i> R. A. Prough, J. Capdevila & R. A. Lubet	122
Metabolism of benzo[α]pyrene by the cytochrome <i>P</i> -450/ <i>P</i> -448 of <i>Saccharomyces cerevisiae</i> . <i>By</i> L. F. J. Woods & A. Wiseman	124
Increased excretion of urinary porphyrins by white rats given intragastrically the chemical carcinogens diethylnitrosamine, monocrotaline, T-2 toxin and ethylmethanesulphonate. <i>By</i> R. Schoental & S. Gibbard	127
Absorption of drugs from the urinary bladder. <i>By</i> N. S. E. Sargent, D. G. Upshall & J. W. Bridges	129
Subunit differences among the multiple forms of mushroom tyrosinase. <i>By</i> D. A. Robb	131
Phenol sulphotransferase in developing chick embryo. <i>By</i> R. A. Collett & A. Ungkitchanukit	132
The occurrence of sulphated glycoproteins in nerve endings. <i>By</i> C. J. Branford White & J. A. Appleby	134
Identification of a putative nicotinic acetylcholine receptor in fractions from housefly brain. <i>By</i> R. Harris, K. J. Cattell & J. F. Donnellan	136
Some properties of protoveratrine-induced γ -aminobutyrate release from rat brain slices. <i>By</i> M. C. W. Minchin	139

Possible involvement of frontal-cortical catecholamine systems in the regulation of neurotransmitter mechanisms at sub-cortical sites in the rat brain. <i>By</i> C. J. Pycock, C. J. Carter & R. W. Kerwin	140
2-Phenylethylamine and amphetamine in human brain: Effects of L-deprenyl in Parkinson's disease. <i>By</i> G. P. Reynolds, P. Riederer & M. Sandler	143
The activities of glutamic acid decarboxylase and choline acetyltransferase in post-mortem brains of schizophrenics and controls. <i>By</i> A. J. Cross & F. Owen	145
Stereospecific binding of 2-amino-6,7-dihydroxy-1,2,3,4-tetrahydronaphthalene to rat brain dopamine receptors. <i>By</i> A. Davis, J. A. Poat & G. N. Woodruff	147
Membrane solubilization by detergents, and detergent/protein ratios. <i>By</i> B. Loizaga, I. G. Gurtubay, J. M. Macarulla, F. M. Goñi & J. C. Gómez	148
Selective solubilization of mitochondrial inner-membrane components by Triton X-100. <i>By</i> I. G. Gurtubay, E. Azagra, A. Gutiérrez-Arranz, J. C. G. Milicua & F. M. Goñi	150
Studies on the mode of action of phenformin in the rat small intestine. <i>By</i> H. J. Leese & S. J. Downing	152
Localization of lysosomes by immunofluorescence. <i>By</i> K. J. Payne, B. H. Anderton, M. J. Davey, D. Robinson & R. Thorpe	154
Hydrophobic labelling of bovine heart cytochrome <i>c</i> with an azidophosphatidylcholine. <i>By</i> R. Bisson, C. Montecucco, H. Gutweniger & A. Azzi	156
A simple culture technique for studying biochemical changes during reticulocyte maturation <i>in vitro</i> . <i>By</i> E. M. Tucker, A. R. Dain & J. D. Young	159
The effect of purified bovine testicular hyaluronidase on cultured rabbit lung fibroblasts. <i>By</i> P. Gacesa, K. S. Dodgson, J. Hunt, R. J. Richards & A. H. Olavesen	162
Protection of rats against hypoglycin and pent-4-enoate toxicity by pretreatment with clofibrate. <i>By</i> F. Van Hoof, L. Hue & H. S. A. Sherratt	163
The reaction of cytochrome <i>cd₁</i> with oxygen and peroxides. <i>By</i> W. J. Ingledew & M. Saraste	166
Inhibition of rat liver glucose 6-phosphatase by <i>N</i> -alkylmaleimides. <i>By</i> B. Vakili & M. Banner	168
Observations on the structure of the carbohydrate moieties of the Tamm-Horsfall glycoprotein. <i>By</i> A. M. M. Afonso & R. D. Marshall	170
Some properties of L-asparagine synthetase of the L-asparaginase-resistant mouse lymphoma 6C3HED. <i>By</i> M. R. Davies & R. D. Marshall	174
Evidence from ³¹ P nuclear magnetic resonance that polyphosphate synthesis is a slip reaction in <i>Paracoccus denitrificans</i> . <i>By</i> S. J. Ferguson, D. G. Gadian & D. B. Kell	176
The relationship between proton translocation and cell yields in the facultative methylotroph <i>Pseudomonas</i> AM1 and a mutant lacking cytochrome <i>c</i> . <i>By</i> C. W. Keevil & C. Anthony	179
Oxidative phosphorylation in membrane preparations of the facultative methylotroph <i>Pseudomonas</i> AM1. <i>By</i> A. I. Netrusov & C. Anthony	182
The subunit structure of the B800-850 light-harvesting pigment protein complex from <i>Rhodospseudomonas sphaeroides</i> strain 2.4.1. <i>By</i> R. J. Cogdell, J. G. Lindsay, W. MacDonald & G. P. Reid	184
	1979

Identification of a previously undescribed cytochrome <i>b</i> in human neutrophils and its relationship to phagocytosis-induced oxidase activity. <i>By</i> A. W. Segal & O. T. G. Jones	187
Continuous distribution of quantitative antibody responses to strain C3000 <i>Escherichia coli</i> in inbred mice. <i>By</i> N. N. Suh & A. Ebringer	188
Restoration of 'contact inhibition' in tumour cells in tissue culture by treatment with thiazolidine-4-carboxylic acid. <i>By</i> M. Gosálvez, C. Vivero & I. Alvarez	191
Bacterial aggregating and conglutinin-like factors in human saliva and amniotic fluid: Investigations of molecular size. <i>By</i> F. M. Eggert	193
Salivary and amniotic-fluid agglutinin and aggregating factors: Evidence for complexing between high-molecular-weight non-mucin glycoproteins and immunoglobulins. <i>By</i> F. M. Eggert	194
Alkaline hydrolysis of nuclear proteins. <i>By</i> M. Gronow & T. M. Thackrah	196
The formation of homospermidine by an enzyme from <i>Rhodopseudomonas viridis</i> . <i>By</i> G. H. Tait	199
Some properties of the purified ferritin reductase from the rat liver microsomes. <i>By</i> Z. Zaman & R. L. Verwilghen	201
Zinc, iron and copper binding by dietary fibre. <i>By</i> C. Reilly	202
The effect of fructose on potassium ion movements across the cell membrane in liver. <i>By</i> L. Sestoft, M. Folke, L. Ø. Kristensen, S. Gammeltoft & P. Bartels	204
Effect of potassium deficiency on cellular composition. <i>By</i> S. Southon & F. W. Heaton	207
Proteins and glycoproteins exposed at the external surface of rat liver mitochondrial inner and outer membranes. <i>By</i> J. G. Lindsay & M. P. D'Souza	210
Evidence that adenosine triphosphatase is one of the mitochondrial antigens of autoimmune liver disease. <i>By</i> H. Baum, J. M. Davey, J. Elsdén, A. Leoutsakos, F. Meek & T. Sayers	213
Associated effluxes of calcium and adenine nucleotides from mitochondria: Mediation by thyroxine and other agents, and inhibition by bongkreikic acid and adenosine diphosphate. <i>By</i> M. H. Al-Shaikhaly & H. Baum	215
An anion-conducting pore in the mitochondrial inner membrane. <i>By</i> M. J. Selwyn, A. P. Dawson & D. V. Fulton	216
Evidence that in submitochondrial particles cytochrome oxidase translocates protons. <i>By</i> M. C. Sorgato & S. J. Ferguson	219
A new steady-state method for investigating mitochondrial proton transport. <i>By</i> M. D. Brand	221
Purification and preliminary structural analysis of the efrapeptins, a group of antibiotics that inhibit the mitochondrial adenosine triphosphatase. <i>By</i> C. G. Jackson, P. E. Linnett, R. B. Beechey & P. J. F. Henderson	224

576TH MEETING, LONDON

Colloquium: Newly Discovered Systems of Enzyme Regulation by Reversible Phosphorylation

Chairman's Introduction: Well-established systems (<i>by title only</i>). <i>By</i> P. Cohen	227
--	-----

Regulation of liver phosphofructokinase by phosphorylation–dephosphorylation (<i>by title only</i>). <i>By</i> I. Brand	227
Regulation of L-pyruvate kinase by phosphorylation–dephosphorylation (<i>by title only</i>). <i>By</i> L. Engstrom	227
Cholesterol ester hydrolase activity in steroid-hormone-producing tissues (<i>by title only</i>). <i>By</i> G. S. Boyd & A. M. S. Gorban	228
Reversible modulation of hydroxymethylglutaryl-coenzyme A reductase and its inactivating enzyme by phosphorylation–dephosphorylation (<i>by title only</i>). <i>By</i> T. S. Ingebritsen	228
Regulation of acetyl-coenzyme A carboxylase by phosphorylation–dephosphorylation (<i>by title only</i>). <i>By</i> D. G. Hardie	228
Glycerol phosphate acyltransferase can be inactivated by cyclic AMP-dependent protein kinase (<i>by title only</i>). <i>By</i> H. Nimmo	229
The control of protein synthesis by phosphorylation (<i>by title only</i>). <i>By</i> T. Hunt	229
The control of phosphorylation of ribosomal proteins (<i>by title only</i>). <i>By</i> D. Leader	229
The control of phosphate content of histone H1 (<i>by title only</i>). <i>By</i> H. Matthews	229
BIOCHEMICAL REVIEWS	
Mitochondrial myopathies. <i>By</i> J. M. Land & J. B. Clark	231
The ‘uniqueness’ of plant mitochondria. <i>By</i> J. M. Palmer	246
BOOK REVIEWS	253
